

Goings On Philadelphia — Release Notes

May — June 2026 · 15 new features · 30+ improvements

BUILDERS

Outing Builder

Step-by-step manual stop chaining with an AI-generated itinerary narrative.

- **Neighborhood anchor** — Stops are pulled from the area you choose (13 Philly neighborhoods)
- **Start & end time** — Set both — events and restaurants are filtered to your window
- **Meal-type filtering** — Breakfast-only spots hidden at dinner time, and vice versa
- **Expandable venue info** — Tap ■ before adding a stop to see description, hours, reserve link
- **Proximity ordering** — Options sorted closest-first from your last chosen stop
- **Walk + Transit mix mode** — New transit option — recommends walk vs. SEPTA per leg by distance
- **Action buttons on results** — Reserve · Website · Map links on every stop in the final itinerary
- **Clean share export** — Formatted itinerary text ready to copy and share

AI Planner

Full itinerary generated by Gemini AI based on your preferences.

- **Neighborhood picker** — Same chip UI as Outing Builder — 13 Philly areas to anchor stops
- **Time window** — Start + end time — calendar events auto-filtered to the window
- **Food preference** — Casual · Fancy · Adventurous · Drinks-forward
- **Occasion type** — Date night · Solo · Friends · Family

TRANSIT

- **Walk · Bike · Drive · Transit · Mix** — Five modes available in both builders
- **Walk + Transit mix (NEW)** — New mode that blends walking and SEPTA in a single outing
- **Per-leg distance recommendation** — Under ~0.4 mi → recommend walk; over → recommend transit

SMART FILTERING

- **Time-window event filter** — Calendar events outside your chosen hours are hidden from pick lists
- **Meal-type restaurant filter** — Restaurants tagged breakfast/lunch/dinner matched to time of day
- **All-day events always shown** — Events with no specific time always pass through

- **Farmers Markets → Markets tab** — Calendar "Farmers Market" events moved out of the Events feed into a "This week" section at the top of the Markets tab

CONTENT & FIXES

- **Liberty Beer Garden added** — New outdoor beer garden in Old City added to the Beer Gardens section
- **Website button replaces "Find tickets"** — Only shows when a real URL exists in the event description
- **Baked geo coordinates** — Lat/lon pre-baked into the app daily — zero Places API calls per visitor
- **Photo cache (service worker)** — Venue photos cached on-device for faster loads and offline support
- **Auto-trending restaurants** — Weekly automated pull from Eater Philly keeps the list fresh
- **.nojekyll added** — Bypasses Jekyll build on GitHub Pages — faster deploys, no more API errors
- **Bookstore data unified** — Single source of truth for all bookstore listings
- **Bug fixes & hardening** — Distance calc fixes, sort stability, event coordinate fallbacks, dead code removed
